

Molecular Medicine of Distant Future Already Available Today

Opinion

Information for professional therapists and persons interested in extraordinary effectiveness of the molecular method of biocybernetic clavithery. The Polish Medical Association has been monitoring the effectiveness of the molecular method in biocybernetic clavithery. On 30 October 2005, the 200th Anniversary of the establishment of the Polish Medical Association the Executive Board published its favorable evaluation of the clavithery for: the Minister of Health, the National Health Fund, Specialized Institutes of Medicine, institutions of higher education in medicine, hospitals and heads of clinics, specialized medical organizations, organizations and persons dealing with propagation of health prophylaxis, ...taking care of the conditions of existence in compliance with Universal Wisdom Of Nature, let us respect any gift of life and be happy also about others' happiness", the author's life motto. Read e-book Eden XXI Wieku (Eden of the 21st Century). More information can be found on the web site: www.klawiterapia.com and in books Klawiterapia (Clavithery), Atlas klawiterapii (Clavithery atlas), in which I developed over 1100 algorithms with the grid of activities quantified with diagnostic recommendations for elimination of various health disorders and dysfunctions of human organism. Contact: Tel/fax +48 22 729 8053, e-mail: centrum@klawiterapia.com center of clavithery - źródło ["SOURCE"], carries out an innovative custom research and implementation program of the molecular method in dermo-visceral non-invasive stimulation in biocybernetic clavithery, which is absolutely unique on the world scale. It is neurophysiologic rehabilitation, whose planned biocybernetic inputs are made by: various types of dermal receptors, innervated collagen fibers, active biological points quantified with medical recommendations and diagnosis, arranged in algorithms for particular health and functional disorders. It involves processes controlled biocybernetically by the peripheral nervous system via tracking, flow blood analysis in the first and second lobe of the pituitary gland. Next by means of clavithery on a dermo-visceral basis and the exercises recommended within, very good blood circulation is restored in distal, physiologically neglected cells and tissues of various endogenous levels. When affected by the scheduled dermo-visceral stimulation and optimum analysis of the quality and quantity of molecular endogenous factors in blood the blood controls the information through the third lobe of the pituitary gland. And next the information travels along efferent nervous ways and simultaneously along the hormonal path (RNA) with blood across the thalamus, hypothalamus and thyroid gland providing positive feedback for the planned processes of homeostasis self-regulation, self-heal, self-regeneration in cells and tissues on particular endogenous levels. The therapeutic process takes place in the optimum reconstruction of 3 million endogenous molecular factors due to health-related negligence

and ischemia (including approximately 100,000 selective various types of own antibodies, on all endogenous levels (dermatome and connective tissue; neurotome; nervous system; myotome, muscles; sclerotome and periosteum). Only through enforced very good blood circulation do you achieve activation of enzymatic and metabolic functions in compliance with the program of DNA/RNA genetic code in the nucleus of each cell on the above mentioned particular endogenous levels. With disorders of the pituitary gland in the first or second lobe the book Klawiterapia (Clavithery) with the indicated topography in Atlas klawiterapii (Clavithery atlas) provides a very detailed biocybernetic algorithm with the grid of activities, which when combined with skillful stimulations of biologically active points excellently supports the proper physiological vegetative and hormonal functions for multi-dimensional human endocrinology.

The process of self-regulation consists in controlling the information obtained from the analysis of the submolecular blood spectrum in the pituitary gland and by means of the above mentioned ways and submolecular neurochemical controllers (also neurotransmitters) in correlation with the quality and quantity of endogenous molecular factors in the enforced activated blood circulation of neglected cells and tissues the reconstruction of immunological resistance takes place over a few days. Only then do we make use of the quantified algorithms with the grid of activities by stimulating biologically active points, also acupunctural on meridians, energetic channels, new points outside meridians and through dermal receptors, innervated collagen fibers), wonderful cryogenic points in the optimum reconstruction of the blood in the neglected human organism. Persons who have been diagnosed to manifest the below described health disorders, and are interested in therapy by means of molecular, biocybernetic method called clavithery, are requested to come to Center of Clavithery Źródło ("Source") before their treatment begins. They should have a written current diagnosis on them. They will be subjected to clavithery procedures, such as:

1. Stress neutralization, liquidation of personality disorders and emotional disorders (even when EEG record is pathological); effective reduction of any kind of pain; tangible improvement of mood, psychics stability and elimination of pain are observable already on first procedure;
2. Psychosomatic and contagious disorders, e.g. viral meningitis, borreliosis, herpes zoster, hepatitis A, B, C, are successfully treated within 7-10 days with the patient's own selective antibodies. Blood is double tested after treatment in various laboratories. The information that viruses had been destroyed by means of clavitherapy is not disclosed;
3. Resuscitation and non-invasive reanimation via neurophysiologic stimulation of certain biologically active points within 12-19 seconds without intubation, or the use of a defibrillator (which damages neuronal synapses not only in the brain); thoracic compression is not applied;
4. Regulation of blood pressure, liquidation of atheromatosis and coronary heart disease with good oxidation, hypertension, hypotension, tachycardia, bradycardia, extrasystoles, arrhythmias, atrial fibrillation, cold feet and hands, migraine, cerebral infarcts, and early cerebral hemorrhagic infarcts up to 3 days;
5. Regulation of own disrupted nervous potentials with evidently weakened final latency with EMG examination and induction of the lost conduction of nerve signals in the brain, (fr plaque), cerebellum, brain stem, core and in various types of peripheral nervous fibers against demyelinating neuropathy with MRI, EMG diagnosis; it also applies to sclerosis multiplex (SM), polyneuropathy, Parkinson disease, epilepsy, etc., recent brain injuries, which are health disorders completely resistant to medications. – Enclosed are the opinions of neurologists and results of medical examinations;
6. Neurophysiologic non-invasive rehabilitation of a few days and liquidation of: posture problems (among others scoliosis, etc.), protrusions and hernias of intervertebral discs with MRI clinical diagnosis. It is worth knowing that each nervous cell, neuron has the memory of structure and function in the zone of neurophysiologic management;
7. Stimulation of algorithms quantified with diagnostic recommendations and cryogenic points in the molecular liquidation of anemia, leucopenia, thrombocytopenia in the reconstruction of immunological resistance with the clinical diagnosis of blood examinations after a few (7-10) days of treatment;
8. Liquidation of functional and structural disorders in conduction of nerve signals of the nervous system caused by the earliest paralytic changes of a metastatic malignant tumor;
9. Molecular and enzymatic liquidation of all addictions (smoking tobacco, alcoholism, drug addition, medication dependence, gambling, Internet/ computer games, etc. with the permanent liquidation of the excess acquired/developed enzymes, proteins constituting the cause of all addictions
10. Neurophysiologic lifting of face wrinkles and muscles, the zone affected by the cranial nerves V and VII and natural treatment of obesity by blocking the first enzyme, that is saliva in decreasing the appetite as well as natural dehydration with the regulation of enzymatic and vegetative functions, particularly in the digestive system;
11. Correction of posture problems, among others scoliosis up to 30 degrees, kyphosis with rotation, reduced lordosis and liquidation of functional disorders of the brain in post-accident movement structures.

A person interested in treatment comes to the Center of Clavitherapy - Źródło ["Source"] obligatorily with a detailed diagnosis and a fit companion, who will be taught to implement the procedure after the treatment for full reinforcement of the regained health over 7-14 days. The rough price list for treatments can be viewed at the reception of the Center. The duration of daily treatment is executed over 6-14 days. We estimate the optimum costs of the treatment after an objective clinical medical diagnosis on the day of treatment termination. The patient with their accompanying person assisted by a physician or physiotherapist/rehabilitator executing the treatment prepares the final written report on the results of the treatment. If the above mentioned disorders do not get liquidated and are proved in a clinical diagnosis to last after the treatment, we refund the deposit paid.

I would like to request that neurologists, neurosurgeons, neurophysiologists, physiologists, molecular biologists, rehabilitators/physiotherapists and other professional therapists should hold a seminar and workshops on health rehabilitation with reference to the above mentioned disorders by means of the molecular method of biocybernetic clavitherapy. You should invite to the seminar the highest authorities in terms of: biocybernetics, molecular biology, neurology, neurosurgery, neurophysiology, orthopedists-traumatologists, gastrologists, general practitioners, laryngologists and other specialists from the medical industry organizations, professional therapists and representatives of the Polish mass media.

I assure all of you that you will experience incredible emotions getting to know extraordinary opportunities of rehabilitating the human organism affected by the above mentioned dysfunctions in a very short time. Dr Ferdynand Barbasiewicz, the creator of the molecular method in biocybernetic clavitherapy and the author of e-book *Eden XXI Wieku* (Eden of the 21st Century).
