Editorial

Optic neuropathies and maculopathies are more common causes of visual loss. However, as optic neuropathies and maculopathies can share some common characteristics, the overlapping of the features of these pathologies occur sometimes and this can cause the difficulty in diagnosis and even the important challenges in the management of the underlying exact pathology. The early diagnosis of some neuro-ophthalmological emergencies such as arteritic anterior ischemic optic neuropathy (AION) and optic neuritis is critical. There are several discriminator aspects providing to distinguish between optic neuropathies and maculopathies [1-9]. The comparison of all aspects and discriminators of optic neuropathy and maculopathy was given in Table 1. To apply the highlights and discriminators given in table will facilitate to distinguish the optic nerve disease from macular diseases.

Table 1: The comparison of all aspects of optic neuropathy and maculopathy [1-9].

<table>
<thead>
<tr>
<th>Feature</th>
<th>Optic Nerve Disease</th>
<th>Macular Disease</th>
</tr>
</thead>
<tbody>
<tr>
<td>Onset</td>
<td>Variable (often acute, subacute)</td>
<td>Variable</td>
</tr>
<tr>
<td>Course</td>
<td>Variable (Progressive, transient, or stable)</td>
<td>Mostly slower progression</td>
</tr>
<tr>
<td>Visual experience</td>
<td>Shading, clouding, graying, darkening</td>
<td>Central blurring, glaring, photophobia, metamorphopsia</td>
</tr>
<tr>
<td>Ocular pain</td>
<td>Maybe occur in eye movements</td>
<td>No usual</td>
</tr>
<tr>
<td>Refractive change</td>
<td>No usual</td>
<td>Maybe develop hyperopic shift</td>
</tr>
<tr>
<td>VA loss</td>
<td>Variable reduction, even to NLP level</td>
<td>Significantly reduction but not to NLP</td>
</tr>
<tr>
<td>Pupils</td>
<td>RAPD in case of unilateral or asymmetrical ON disease</td>
<td>No RAPD, if severe unilateral retinal involvement is absent</td>
</tr>
<tr>
<td>CS and brightness</td>
<td>Significantly reduced</td>
<td>Mildly reduced</td>
</tr>
<tr>
<td>Color vision</td>
<td>Significantly reduced</td>
<td>Mildly reduced</td>
