Keywords: Bariatric surgery; Body image; Obesity

Body Image

It is psychological factor person perception of their physical appearance or internal sense of how one’s body appears to other.

a. It is common to struggle with body image, no matter who you are.

b. Severe negative body image can lead to serious eating and exercise disorders.

c. Feeling good about yourself can affect your mental health and how you behave.

We all have feelings about the way we look: our overall body image can range from very positive to very negative. Positive Body image means that most of the time, you see yourself accurately, you feel comfortable in your body, and you feel good about the way you look. Negative Body image develops when someone feels her or his body does not measure up to family, social, or media ideals. Having a negative body image can have a harmful effect on one’s health and well-being, and you may want to talk with a professional counselor (Figures 1 & 2).

What influences body image?

The people around us and our culture strongly influence it. We get both positive and negative messages we also get messages about body image from television, magazines, films, and other media.

Many of the beliefs we have about the way women and men "should" look coming from the models and celebrities we see in the media.
