

Dizziness Or Vertigo (DOV) Questionnaire

Dear Client:

Please think of the symptoms and form of your problem and then complete the questionnaire. As this questionnaire is named "dizziness or vertigo questionnaire", meaning of "dizziness" and "vertigo" should be explained to you before completion of the questionnaire. They have two different meanings in medical terms. Dizziness often refers to symptoms such as lightheadedness, blackouts, giddiness and wooziness experienced by the patient, but vertigo means sensation of spinning or rotation occurring to the patient, which gets worse by moving the head and body. In some cases, nausea and vomiting may exist and in severe cases, you may have a sensation of earthquake. For more accurate diagnosis of the reason of your problem, you are better to carefully think which one you experience. If you have a sense of rotation, imbalance, and staggering or you fall down, please check item 1 (vertigo).

If you experience giddiness, wooziness, blackouts and lightheadedness (no rotation and imbalance), please check item 2 (dizziness). If you have both feelings, please check item 3 (both dizziness and vertigo).

- 1) I feel vertigo
- 2) I feel dizziness
- 3) I feel both vertigo and dizziness

Please read the following questions carefully and check the related checkbox.
