I am honored to become the Editor-in-Chief of MedCrave Online Journal of Proteomics & Bioinformatics (MOJPB). The field of Proteomics and Bioinformatics is changing the landscape of Medicine and Healthcare, Biomarker discovery, Drug discovery and development, DNA computing, Big data analytics, Biodiversity and Environmental research. Plethora of datamining tools and datasets are increasingly becoming available to decipher the human genome.

The Journal is in the second year of publication and had made significant contributions to the field by providing rapid publications of key research findings and datasets to the global audience. To-Date (24/11/2015) 22 research articles, 14 editorials, 13 Opinion, 7 review articles and 170 datasets have been published. It is my goal to develop a higher profile visibility and impact factor for the Journal including obtaining listing in PubMed for all the publications. To this end high quality research publications including short communications of preliminary results will be encouraged. Manuscripts will undergo a stringent peer-review and a rapid response will be provided to the authors. Thought-provoking ideas in the form of Editorials and Opinions will be entertained.

We will have special issues and invited review articles by prominent scientists from academia and industry in the field of proteomics and bioinformatics. I will be working closely with our editorial team and the MedCrave publication staff to ensure the continuing growth, visibility and success of this journal. I look forward to receiving your submissions and welcome your ideas, suggestions and comments for MOJPB.

Stay tuned.
