The alternative medicine is the quantum medicine of the future

Abstract

We are a material body and aura, which is our field half. "Aura" means "light" in Hebrew and since the light is in quants – the laser-type aura is our quantum half. The aura is weak field, but this weak field rules and regulates everything in the body – not with its strength, but with the information it carries. Since only nonlinear fields can imprint information, the aura must be (and it is) nonlinear electromagnetic field (NEMF). We can cure a sick body either by: 1/ restoring the balance of the material body with pharmaceutical drugs or natural remedies, or 2/ restoring the balance of the aura, which rules and regulates everything in the body. Since "aura" is "light" and the light is in quants, the healing through the aura is Quantum Medicine. The existing Alternative Medicine (acupuncture and homeopathic remedies) cure through balancing the aura, and if so, Alternative Medicine is Quantum Medicine, and the Quantum Medicine is the Medicine of the Future.

Keywords: pharmaceutical medicine and alternative medicine, alternative medicine is quantum medicine, quantum medicine is future medicine

Introduction

We are a material body and the aura nonlinear electromagnetic field (NEMF), which is our quantum half

Our science chose to believe that we are only material body, but when I was in middle school, I had in my class two identical twin girls. Being with the same DNA, they had totally identical material bodies. To learn to distinguish them, I decided to become their friend, and then I found with surprise that they were totally different emotional personalities – one was like the Sun (very warm personality) and the other one was like the Moon (very cold personality). I decided that I will become a scientist and one day I will find out what made the twins so different. There must be something in the identical twins beside the material body that makes them emotionally different.

For many years, I photographed the aura with Kirlian photography (which uses high voltage electric field to multiply the photons of the weak aura and make it photographable), and I found that our aura is emotionally sensitive. Since when we experience strong positive emotions (and our aura is brighter) - we say we are in high Spirit, and when we experience negative emotions (and the aura is dimmer) - we say we are in low Spirit, I decided that the emotionally-sensitive aura must be our Spirit, which make us emotional. Thus, the identical twin-girls are different personalities because they have attached to their identical material bodies (with the same DNA) different Spirits, and this made them emotionally different.

It seems that a fertilized cell can develop into an embryo only if the field of the Spirit is present to say what type of emotional creature the future individual is going to be.[2] This makes all living beings (humans, animals and plants) a material body and a living force – emotional Spirit (seen as aura), which makes all living beings alive, emotional, and creative. The Spirit is a field with imprinted information what kind of emotional creature the individual is going to be. Since nonlinear physics teaches that only nonlinear fields do not dissipate and can imprint information, the Spirit must be (and it is) nonlinear electromagnetic field (NEMF).[1]

When the living force (called Spirit) leaves the body, the body becomes an empty lifeless shell that needs to be discarded. Our science (and together with it our medicine) chose to disregard the fact that we are emotional (which makes us intuitively creative) and deny the important role emotions play in our health and life. It is a comic situation - on one side, our medicine agrees that stress (strong negative emotions) can cause cancer, but on the other side our medicine (and science) deny the effect of emotions on our health.

This is because we chose to believe that we are only material body, which we treat with material substances (drugs), and we completely ignore our field half (seen as aura), which is our emotional half. Once we embrace the fact that we are a material body and emotional Spirit (seen as aura), we will know that beside the pharmaceutical medicine developed for the material body, a whole specter of alternative healing[3] exists that heals through balancing the emotionally-sensitive subtle aura (Spirit), which rules and regulates everything in the material body.

Since the Emotional Spirit is subtle aura field (NEMF), and "aura" means "light" in Hebrew (which is in quants), all alternative healing through the Spirit (seen as aura) is Quantum Healing.

Our missing quantum half

Thus, we are a material body and a field seen as aura, which is our emotional half making us emotional and intuitively creative.[4] There is no creativity without emotions and without the emotional Spirit we would be very primitive creatures. If so, why is our science denying the presence of the emotional Spirit? It is because our Science was built on the principle: if something cannot be measured – it does not exist. Since the Spirit is a very weak field (1,000 times weaker than the field of the material body), its existence was denied (instead of building more sensitive equipment to be able to measure it, as I did).[1]

Healing with the quantum half

My interest to using our field (Quantum) half to heal the body started in 1983, when I reported at the 8th World Congress of Acupuncture my mathematical model of acupuncture.[2] The acupuncture points are conducting ellipses, imbedded in the semiconducting media of the

body. This makes the media inhomogenic, and inhomogenic medias are described only with nonlinear equations. So, my mathematical equations (describing acupuncture) were nonlinear and nonlinear equations have more than one solution.

My equations had two solutions – electric impulse and wave. Electric impulse running from each treated acupuncture point along the acupuncture meridian was measured by the Chinese. (The acupuncture meridian is a chain of acupuncture points (ellipses) oriented with their long axes along the meridian). However, nobody has measured waves running along the acupuncture meridian. I insisted that there is no reason why I should throw the wave solution. Hungarian scientist showed interest to this and one year later he reported[3] that he detected waves running along the acupuncture meridian (the direction of the meridians is determined by DC difference).

The quantum medicine – the medicine of the future

Let us repeat once more - we are a material body and subtle laser-type aura field, which is our emotional Spirit making us emotional and intuitively creative. We can heal: 1/ the material body with material substances (pharmaceutical drugs or natural substances), or 2/ balance the aura field – the subtle field of our Emotional Spirit, which rules and regulates everything in the material body. The Emotional Spirit could be balanced by: 1/ balancing our emotions, or 2/ balancing the electrical and magnetic components of the nonlinear electromagnetic field (NEMF) of our aura (Spirit).

Therefore, alternative medicine restores the health by balancing the electrical and magnetic components the subtle field of the aura (Spirit) NEMF, which rules and regulates everything in the material body. Let us repeat once more - since "aura" is "light" and the light is in quants, the Alternative Medicine (which heals though balancing the field of the aura (Spirit)) is Quantum Medicine.[5] The aura could be balanced: 1/ by the use of magnets (magnetic therapy); 2/ by the use of electrical stimulation with needles (acupuncture),[3] 3/ with homeopathic remedies, which do not contain the healing substance, but have the frequencies of the healing substance imprinted on the water structure,[5,6] (and these imprinted frequencies restore the normal healthy frequencies of the subtle aura (Spirit) NEMF).[7,8]

Conclusion

In Europe, the Alternative and Western Medicine peacefully coexist because they are equally valued and the same should be in the US because the Alternative Medicine is the Quantum Medicine of the Future. Dr. Vallery Hunt from the University if Berkley, California, studied the biofield (seen as aura) her entire life.[9] She claims that:

I. 90% of the people have biofield (aura) with frequency 200 Hz and all pharmaceutical drugs are tailored for them.

II. However, 10% of the people have biofields with frequency 400 – 800 Hz.

These are the most Spiritual and Intellectual individuals living on Earth. They are more emotionally sensitive, drug sensitive, and food sensitive and the pharmaceutical drugs are too strong for them – they are suffering more from the side effects than benefiting from the drugs. Being more emotionally sensitive (these people are more intuitive, telepathic, and clairvoyant), and Alternative Medicine works for them better - it restores the healthy frequencies of their emotionally-sensitive aura (Spirit) NEMF.

In year 2012, we entered the Era of Spiritual Uplift, Aquarius. If so, after year 2012, we can expect Spiritual Uplift - increase of the frequencies of people's auras (Spirits). This means that in the Era of Aquarius, more people will have higher frequencies of their aura, and more people will need Alternative (Quantum) Medicine. This is what will make the Quantum Medicine – the medicine of the Future.
