

Bioinformatic resonance in myths and science

Abstract

Now, when we started to make Quantum Computers, it is time to acknowledge that we all have Quantum Computers in our Subconscious, of which we are not consciously aware, and to which not everybody has access. Our Quantum Computers work with the waves of our weak informational nonlinear electromagnetic fields (NEMFs), which we see as auras and call Spirits. The Quantum Computers allow quantum jumps to the past, which allow to see the past, and quantum jumps to the future, which allow to foresee the future, but only people with major frequencies of their NEMFs between 400 and 800 Hz, who are Spiritual and meet some moral criteria, are allowed to have access to the valuable information stored in their Quantum Computers and benefit from it. The article explains the simultaneous identical solution of the same problem by two scientists living on different ends of the planet as two scientists with the same major frequencies of their weak informational NEMFs getting access to their Quantum Computers and coming up with the same solutions. The article also explains the simultaneous appearance of the same legends (myths) at different ends of the planet Earth as access to recorded information of the history of humanity on Earth in the Quantum Computer in the Subconscious, with the purpose of warning the humanity about disastrous or unusual events that would happen again.

Keywords: bioinformatics resonance, resonance in science, resonance in myths, resonance of quantum computers, quantum computers work with NEMFs' waves

Introduction

Bioinformatic resonance in science is when two scientists (usually from two different countries) come up independently with the same solution of the same problem. However, when two different nations, living very far apart, come up with the same legend, we call it myth and refuse to believe in it. This is because our civilization refused to believe that myths could reflect real events from the past.

Bioinformatic resonance in Science

I was a third year graduate student in Russia working on my PhD degree in physics when my boss one morning called me and with troubled voice informed me that somebody in France has published an article with the same equations as mine. This meant one chapter of my thesis would be crossed out. I immediately went to the Library to see the article with my eyes and indeed the equations were the same—even the used symbols were the same. The equations were the same, but luckily for me, we have outsmarted the French scientist in the numerical solving of the equations.

We introduced a translation vector, which allowed us to replace the summation with integration and this simplified tremendously the numerical calculations. The French scientist used summation and regardless of the fact that he had access to much more powerful computer, he could not go farther than numerically solving the first three cases because the summation was taking too much computer time. I cited his work in my thesis as a confirmation that the used by us integration, which tremendously simplified the numerical calculations, was the right and smart way to proceed with because our results were in perfect agreement with the first three cases calculated with summation by the French scientist. The simplification we used allowed us to calculate up to 15 cases.

This article is about the resonance between the minds of two scientists working on the same problem in two different countries. Examples like this are many in science. How is this possible and how is this done? Our brain has two computers—the Digital Computer of our Conscious Mind and the Quantum Computer of our Subconscious Mind, which operates with the waves of our nonlinear electromagnetic field (NEMF), which we see as aura ('aura' means 'light' in Hebrew), and we call it Spirit.¹ The Quantum Computer is our Supercomputer because hypnotists found with surprise that when they put the Conscious to sleep to access the Subconscious, the hypnotized people calculate 10,000 times faster.²

Full intuitive creativity is a synchronous work of the Digital Computer of our Conscious, which works on biochemical basis, and the Quantum Super Computer of our Subconscious, which works with the waves of our NEMF.³ Partial intuitive creativity is a transfer of solutions from the Quantum Computer of the Subconscious to the Digital Computer of our Conscious.⁴ From the Quantum nature of the Computer comes the unpredictability of the moment when the ready solution of the Subconscious Quantum Super Computer will pop into the Conscious Digital Computer.

Dannis Gabor, who took Nobel Prize for the first laser's holographic images said:

"Creativity is a process partly conscious, partly unconscious. You think out the problem thoroughly, then you sleep on it, wait a while, and if you are lucky it comes out ready made. All the real thinking goes on in your unconscious... There is no creativity without a surprise, without 'jumping a logical gap' and not knowing how you have done it."⁵

The desire to find solution of a problem could nest in the head of more than one person and these people will get the same solutions to

the problem from their Quantum Computers. However, as said in M Kuman,⁶ not everybody has access to the Quantum Computer. The Quantum Computer is the biggest gift of the Creator to us. However, the Creator, who is Supreme Intelligence, requested only highly spiritual people, who meet some moral criteria, to have access to the powerful Quantum Computer (which is self-understanding).

Valerie Hunt measured the frequencies of our NEMF⁷ and she found that while most of the people living on Earth (~90%) have major frequency of their field 200 Hz, the clairvoyant people (who can do quantum jumps to the future and predict the future, or see the past by quantum jump to the past) have major frequency of their NEMF from 400 to 800 Hz. These are the people who have access to their Quantum Computers in the Subconscious. Thus, two clairvoyant people with the same or similar frequency of their NEMF, who have access to their Quantum Computers, will come up with the same solution of the same problem. (For the different spiritual levels see).⁸

Bioinformatic resonance in mythology

The fact that countries at different ends of the planets, which don't communicate, have the same historic legends, remains a mystery. Joseph Campbell⁹ stumbled on these common myths, but he could not determine the source of it. We are going to explain in this article the origin of these common historic legends. It seems that the Quantum Computer in the Subconscious, which works with the waves of the Spirit, contains not only compact holographic record of our lifetime (revealed through hypnosis), but also contains compact holographic record of the history of humanity on Earth.

As already said, people with major frequency of their NEMFs between 400 and 800 Hz, who have access to their Quantum Computer, not only can make quantum jumps to the future and foresee the future, they can make quantum jumps to the past and see the past. Two or more people with the same or similar major frequencies of their NEMF, living in different countries on different ends of the planet, can see the same events of the past, which we call legends.

Only the existence of such record could explain the common basis of so many of the historic legends, which we call myths and refuse to believe in them. Thus, the common origin of all myths (legends) is the Quantum Computer in the Subconscious, which obviously contains compact holographic record of the history of humanity on Earth, as well. This historic record is accessible to people with major frequencies of their NEMFs between 400 and 800 Hz, who have access to the Quantum Computer, which allows quantum jumps to the past.

The purpose of having this historic record at subconscious level is to prepare us for disasters or unusual events that have happened in the past and would happen again in the future. The book "Hamlet's Mill" conveys many such mythological stories of disastrous or unusual events, which our Earth faced in the past.¹⁰ One of them was flipping of the magnetic poles of the Earth. While the magnetic poles of the Sun flip regularly as a clock, the magnetic poles of the Earth flip very rarely and irregularly because of the cleft (not spherical) form of the Earth, which is known from the Earth's satellites.

Since flipping of the magnetic poles of the Earth means changing the direction of its spinning, when the magnetic poles of the earth flip, the Earth will start spinning in opposite direction. Such event is described in "Hamlet's Mill".^{10,11} The Earth stopped spinning for 3 days and then started spinning in opposite direction. Russian studies found that at the present moment the northern pole is far south in

the Pacific. Are we going to see the Earth changing its direction of spinning? Is this rare event going to happen on December 21, 2020, when seven planets align on one side of the Sun? (NASA data).

However, we should not ascribe to the Subconscious the deliberate changes made in Christianity with the purpose to abolish the old pagan religion requiring sacrifices (including human sacrifices). Considering the noble purpose - abolishing the old religion requiring sacrifices-we should forgive our ancestors for making these changes. It was not easy to convince the people to abandon their old believes. That is why the head of the British church ordered: "Build churches on top of the pagan places".¹² The second approach was: "The pageant story for the birth of Krishna from the old religion was transplanted in the new religion. Even the new name of the religion "Christianity" sounds close to Krishna.

Conclusion

The article explains that the same solution of the same problem by two individuals living at different geographic latitudes and the same historic legends (myths) in two different countries existing at different end of the planet Earth have the same explanation. The individuals had similar frequencies in the diapason 400–800 Hz of their NEMF, which allowed them access to the Quantum Computer in the Subconscious. Two scientists with similar frequencies of their NEMF taped to the Quantum Computer and came up with the same solutions and two clairvoyants from two different countries taped to the historic information stored in their Quantum Computers and came up with the same legends (myths). It make sense that such historic information should exist recorded at subconscious level in the Quantum Computer to warn us about disastrous or rare events that have happened in the past and could happen in the future.
