

The electromagnetic-pollution around us influences our immunity through our NEMFs—very important in pandemics

Editorial

We are dark material bodies and light NEMF (nonlinear electromagnetic field), which we see as aura.¹ Russian studies claim that the external EMFs should be less than 1% not to influence the functioning of our NEMF. They claim that presently the external EMF in Russia exceeds 10%. I could not find any precise data for the US, but it must be more than 20%: 1/ because when looked from a satellite, the North American Continent glows—America has the largest production and consumption of electrical energy in the world and 2/ because America has the largest number of cellular phones per capita, which brings a lot of microwave pollution.²

What this has to do with the pandemic? The author developed sensitive equipment and measured the body's weak NEMF for almost 40 years. The body NEMF is 1,000 times weaker than the electromagnetic field of our biocurrents and it is very sensitive—sensitive to emotions,² even sensitive to our way of thinking.⁴ Positive thinking increases the energy of our NEMF, while negative thinking drains its energy.⁴ And we are exposing this sensitive NEMF to horse doses of external EMF radiation.

What do you think our bodies would do first – trying to adapt to the polluted with electromagnetic energy environment or fight the virus? Maybe the pandemic had to happen to open our eyes to what we have done to our environment. There is no doubt that this polluted with EMF environment will influence our NEMFs, which rule and regulate everything in the body,² including our immune system. So, we would better start doing something right away, if we want to survive the Pandemic.

I wrote an article—don't be scared, be prepared⁵ and I don't mean to scare you with this article because fear is a negative emotion and it would drain the energy off our NEMFs, which rule and regulate everything in the body,⁵ including our immune systems. We need to find a way to decrease the external EMF, but we are so attracted to our digital TV, computers, and cellular phones that we could hardly imagine our lives without them. Another approach is to find a way to screen ourselves from this external EMF radiation. Could we?

I found on the internet that the Chinese are working on this and have made some progress, but the article was published in Chinese language and my Chinese is not good enough to read scientific article in Chinese. This is not the right approach anyway. We cannot screen our body to protect ourselves from the electromagnetic radiation because the biorhythms of our body (the rhythms with which our body functions) are ruled by periodic external electromagnetic fields. Such are: the daily (circadian) rhythms of body functioning, our yearly (seasonal) rhythms, etc.⁶

A natural question arises: Is our body capable to adapt to this increased electromagnetic radiation? I have an article published: "Our unlimited possibility to adapt".⁷ So we have the ability to adapt, which is done through the waves of our NEMF, which scan the environment

and send signals to the material body to change to adapt the new environment.⁸ However, the increase of the external electromagnetic radiation was too sudden too fast. We have microwaves, cellular phones, TVs, and all kind of wireless appliances working on microwave frequency.

I am telling all my friends: "Do not put the cellular phone next to your head! Do you put your head in the microwave when it is still working? No, because the instruction (for microwave use) says never open the microwave when it is still working. So, always use the speaker of your cellular phone and keep the phone as far as possible from your body when you talk... and never carry it in your pocket close to the body."

Dr. Devra Davis in her lecture: "The Truth about Mobil Phones" reported research that shows that: 1/ men carrying their cellular phones in the back pocket of their pants have lower sperm count, 2/ women carrying their cellular phones in their bras are at higher risk to develop breast cancer, 3/ holding the cellular phone next to your head increases your chances to develop brain tumor. She wrote a book "Disconnect", in which most of this research is cited.

I have an article published: "Why Are We Having the Pandemic and Is It Related to the Global Warming?"⁹ In it, I explained that we have the global warming because according to study of the glaciers in year 2020 we are at the maximum of the big cycle of solar activity with large amplitude and a period of 2,562.5 years - its minimums are the Ice Ages. In 2020, we are also at the maximum of the small cycle of solar activity with periodicity in average 11 years.

The Pandemic relates to the global warming in two ways.⁹ First, the increased solar activity mutates the DNA of the viruses and they evolve to new types our body does not know how to deal with. Second, the increased solar activity causes magnetic storms on Earth making the magnetic field of the Earth to fluctuate with large amplitude and our NEMF, which rules and regulates everything in the body including our immune system, is very sensitive to magnetic changes.

Speaking about magnetic storms, I have an article written¹⁰ explaining levitation and psycho-kinesis, in which I cite experimental evidence that psycho-kinesis is easier done during magnetic storms.¹⁰ Psycho-kinesis is the ability of the Mind to make objects levitate and move. It is done through the Quantum Computer in our Subconscious Mind, which work with the waves of our NEMF.¹¹⁻¹³

Since the body NEMF, which rules and regulates everything in the body including our immune system, is sensitive to changes in the magnetic field, the earth's magnetic storms will make our immune abilities to fluctuate... and this is not good when new viruses are around. To all this, we need to add the fact that we have severely polluted our environment with electromagnetic radiation, which we don't know how to correct. We need to find a way to turn the negative impact of this electromagnetic radiation into positive. Can we? I have some ideas, but I need to let them ripe before to test them.
