Editorial

I am writing about this topic after seeing a gynecologist a month ago in my clinic for her treatment. She told me that she is seeing many cases of fetal death with no apparent cause.

What I observe in my daily practice is that these changes are all at the internal energy level, which modern Western medicine does not study. After the changes in the medical curriculum following the implementation of the Flexner Report (1910), medical schools have only studied the parts of the body that we can observe and measure in human beings, which is the materialized part of energy. They stopped studying the parts that we cannot see, and therefore, many diagnoses are not being made properly because we possess a part composed of vital energy that is invisible to the eyes.^{1,2}

Because of this, we are experiencing a situation in global health where many pathologies are appearing, but the root causes are not being diagnosed, and we are only treating the symptoms caused by these alterations which at the root are effecting the vital energy of the human being.³

In a publication I wrote in 2021 titled *Energy Alterations and Chakras' Energy Deficiencies and Propensity to SARS-CoV-2 Infection*, I analyzed the internal energy of the five internal massive organs of 1000 patients in my clinic in Brazil before the COVID-19 pandemic, I realized then that, 90 percent of the patients lacked this energy described by the five elements theory of Traditional Chinese Medicine. These organs are important for producing all the vital energy necessary for our survival, for keeping Blood circulating within blood vessels, and in the case of pregnant women, this energy is responsible for maintaining fetal nutrition, maintaining growth within the uterine cavity, and for the immune system's processes, preventing disease.⁴

If these organs are currently lacking vital energy, and one of the main causes being the modernization of communication technologies after the implementation of 5G in our lives, the vital energy needed to maintain a healthy pregnancy is undermined in this situation, leading to more frequent cases of fetal death due to lack of this energy to sustain a pregnancy until its term.^{1,3}

The medical professional may perform various tests, including genetic testing, but often they will not be able to find the cause and will say that everything is normal.⁵

This can happen because the vital energy aspect of a human being does not show up in tests, and therefore, even if the tests come up normal, this does not mean that the patient does not have any abnormalities.⁶

The altered energy component only affects laboratory tests after years of internal energy deficiency, and therefore a normal test result today should alert us to the fact that the patient's energy component may possibly be altered, but that there has not yet been enough time for the person's laboratory tests to show this.⁵

Therefore, in one of my articles, I wrote about how to improve a pregnant woman's immunity without getting a COVID-19 vaccine. I discussed the need to treat this lack of vital energy in the five internal massive organs of Traditional Chinese Medicine (Liver, Heart, Spleen, Lungs, and Kidneys) using a new theory I wrote, titled *Constitutional Homeopathy of the Five Elements Based on Traditional Chinese Medicine*, where I use homeopathic remedies discovered by Samuel Hahnemann (1755-1843) to replenish the energy of these organs. This is because, according to the Arndt-Schultz law (1888), highly diluted medications increase our vital energy, while highly concentrated medications further reduce it, potentially causing complications in the new human being we come across today, who is considered immunodeficient due to a lack of vital energy.⁷⁻⁹

Therefore, to avoid these unpleasant situations that a pregnant woman can experience nowadays, we should treat this lack of vital energy in the five major internal organs, strengthen internal energy and immunity, thus reducing the chances of babies dying in the womb due to lack of energy to maintain nutrition and growth.³

The problem currently is that the use of highly concentrated medications, including vitamins, is causing an even greater drop in this vital energy, favoring cases of thrombosis or thrombophilia. Therefore, the D-dimer test is very important for diagnosis in pregnant women to monitor their pregnancy.¹⁰

In these cases, the ideal would be to use only highly diluted medications to treat thrombophilia, because according to the Arndt-Schultz Law, created in 1888 by two German scientists, the use of any highly concentrated medication can further reduce internal vital energy and cause more complications for the patient, such as myocardial infarction, thrombosis, stroke, or even sudden death.^{9,11}

Therefore, it is very important to know today that we are not dealing with the same type of human being as we were 15 years ago, and thus, knowing that human beings have changed, we must change the type of medication we prescribe for them, because their energy patterns have changed. Hence, only the use of highly diluted medications is recommended today to avoid the complications we are frequently seeing among us, especially among young people.^{1,12,13}

For this to happen, there needs to be a reformulation of the curriculum of present day medical schools. They need to incorporate older forms of medicine into their teachings, as said by Hippocrates

(460BC-377BC), the Father of medicine in one of his writings, “it is important to consider older ancient medical traditions prior to the knowledge we have today”. So then, medical doctors can know how to diagnose and treat this new human being that we have today, whose vital energy has been altered, and is invisible to the naked eye.^{13,14}
